Sound attenuation

CXV-D condensers use **quiet and low kW axial fans**, but to reduce noise even further, you can extend your CXV-D condensers with <u>sound attenuation</u>:

- cylindrical baffles at the air intake
- insulated discharge attenuator without baffles

or choose the Whisper quiet fan alternative.

Your <u>local BAC representative</u> can explain any of the above sound attenuator options in more detail and provide you with <u>sound pressure and sound power data.</u>
