

## Adiabatic cooling

### Options and Accessories

Below is a listing of the main TRC options and accessories. If your required option or accessory is not listed, look no further than your [local BAC representative](#).

Increase the coil's resistance against a harsh atmosphere.

Reducing noise at air **intake and discharge points** brings us closed to silent cooling equipment.

Increase the degree of redundancy, providing a higher backup capacity for your installation.

The recirculation pump helps to further cut down on water consumption.

This option integrates the adiabatic cooler's control system in your BMS system.

### Motor removal davit

For **easy removal or lifting** of the side motor.

### Coil connection duct plenum

Allows a connection between the unit and a nearby structure.

### Ladder

A ladder to **facilitate access to the top of the unit** and safe inspection of your condenser.

Cuts power to motor with **safety in mind** during inspection or maintenance.

### Sealed bottom

The sealed bottom captures fluids and evacuates them.
