

Closed circuit cooling towers

Options and accessories

Sound attenuation

VFL closed circuit cooling towers use **quiet centrifugal fans**, **but to reduce noise even further**, you can extend your VFL cooling tower with sound attenuators at the air intake and discharge points.

For residential areas:

Sound attenuation (<u>HS type</u>)

- Discharge attenuator with vertical baffles
- Intake attenuator with straight baffles

For rural areas:

Heavy sound attenuation (HD type)

- Discharge attenuator with vertical baffles
- Double intake attenuator with straight baffles

e detail and

Your <u>local BAC representative</u> can explain any of the above sound attenuator options in more provide you with <u>sound pressure and sound power data.</u>
