Sump sweeper piping

A sump sweeper piping system **increases water circulation and agitation** in the basin and is designed to be used in combination with a <u>filtration</u> system. It does all this:

- improves your filtration system performance
- helps improve year-round system hygiene
- requires less cooling tower cleaning
- prevents under deposit corrosion

Sump sweeper piping can be factory-installed or retrofitted on-site.

Want to install sump sweeper piping on your cooling equipment? Contact your local <u>BAC</u> representative for more information.
